Arados FONTÁN

Serie 5200

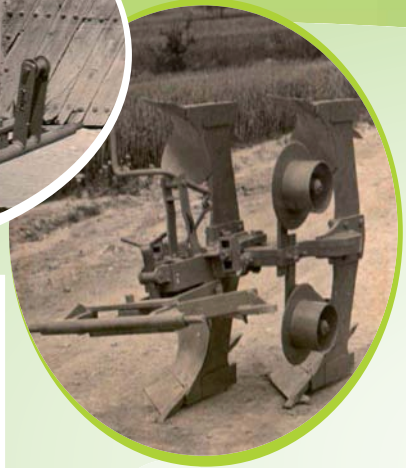

Improving plowing!

From our beginnings in 1962 to the present we have been developing solutions for tractors medium and high power.

52 years after our first plough, We show you the series 5200 more modern, more efficient, more profitable and with the same philosophy of life.

We have obtained a light but very resistant plough, suitable for agriculture in the XXI century.

The simplest and most effective plough on the market, with the possibility of graduating pressure as required for each field.

The first mouldboard of this new serie is set very close to the axis of the tractor which allows a better use of power.

VARIABLE WIDTH

- ✓ ADAPTS TO THE TRACTION AVAILABLE.
- ✓ OUTLINES THE OBSTACLES, STRAIGHTENS THE ROWS.
- ✓ IT FACES THE MOST DIFFICULT DUNKS.
- ✓ ALTERNATES THE PROFILE OF THE WORK IN SPI SUMMER AND WINTER
- ✓ FINISHING IRREGULAR PLOTS.
- ✓ MAINTAINS THE WORK RATE EVEN ON STEEP SLOPES.
- ✓ LESS TIME SPENT PER HECTARE, THUS SAVING FUEL PER HOUR PLOWED.
